

Booking calendar embed checklist

Everything to check before and after you put a booking calendar on your website.

Before you paste

- ☐ My booking page is published and I have booked it once myself
- ☐ I know which website builder and which plan I am on
- ☐ That plan allows iframes in a code or HTML block (see the table)
- ☐ I have the embed code for the right service copied
- ☐ I have the plain booking link saved as a fallback

Where to paste, by builder

Builder	Block to use	Plan rule to check
Squarespace	Code block, Mode set to HTML	Iframes need the Core, Plus or Advanced plan
WordPress.com	Custom HTML block	Iframes need a paid plan with hosting features
Self-hosted WordPress	Custom HTML block	Usually allowed; a security plugin may strip it
Wix	Add Elements, Embed Code, Embed HTML	Only https code displays
Other: _____		

After you publish the page

- ☐ Calendar shows in full on a phone, no sideways scrolling
- ☐ The times and the form are not cut off at the bottom
- ☐ One real booking made from the phone
- ☐ The booking appeared in my account
- ☐ A "Book now" button elsewhere on the site points to this page
- ☐ The plain link is in my email signature and social profiles too

Page on my site with the calendar: _____
