

Free form builder comparison worksheet

Score any free plan against the limits that matter to you, before you move a single form.

1. The limit that would hurt you first

Tick the one that matters most. Check it on each vendor's own pricing page, not on a review site.

- ☐ Answers or submissions per month
- ☐ Number of live forms
- ☐ File upload size, and whether uploaders must sign in
- ☐ The vendor's branding on the form
- ☐ Taking payments or booking appointments in the form
- ☐ Email alerts when an answer arrives

2. Score three tools (0 = no, 1 = partly, 2 = yes)

Check	Tool A:	Tool B:	Tool C:
	-----	-----	-----
Free plan covers my monthly answers			
Enough live forms for what I run today			
Show a question only when an earlier answer calls for it			
Live calculation (price, score or total)			
File upload without the visitor signing in anywhere			
Drawn signature			
Embed on my site (in page or pop-up)			
Results I can filter and export to CSV			
Works on a phone without sideways scrolling			
Upgrade path costs less than my budget			
Total (out of 20)			

3. The ten-minute test form

Build exactly this in each tool, then fill it in on your phone.

1. Name and email, both required.
2. A multiple-choice question: "What do you need?" with three options.
3. A follow-up long answer that appears only for the third option.
4. A file upload question.
5. A signature question.
6. Send one answer, then find it in the results and export it.

Time each build: _____ min / _____ min / _____ min. The tool you finished fastest in, with no limit you ticked in section 1, is usually the right one.
