

20 ChatGPT-in-Chrome prompts for business

Copy, paste, adjust the names. Use Chat for the read-and-compare prompts and Work (type @Chrome) for the ones that act. Every form prompt ends with 'stop before submitting' so you keep the final click.

WHAT THIS ADDS

Start with the first ten (they only read and compare). Move to the second ten once the results look right. Choose Allow once the first time ChatGPT asks to use a website.

Read and compare (Chat)

1. Compare the three supplier quotes I have open by price, delivery time, minimum order and return policy. Put it in a table.
2. Compare these pricing pages against our requirements: [list]. Which plan includes everything we need, and what does it cost per year?
3. Read the competitor pages in my tabs and list what they offer that we don't, in plain English.
4. Explain this contract page in plain English. What am I agreeing to, and what should I ask before signing?
5. Look at these job applicants' portfolio tabs and summarise each one in three lines.
6. Summarise the reviews on this page: the top three complaints and the top three compliments.
7. Compare the software tools in my tabs for a 5-person team: price, free trial, and what's missing.
8. Read this grant or programme page and tell me if a small business like mine qualifies, and the deadline.
9. From the tabs I have open, list every date and deadline mentioned, with the source tab.
10. Look at all the tabs I have open and compare the contractor services. Then draft an email to the one that fits.

Act for you (Work, @Chrome)

1. Put the vendors in these tabs into my comparison sheet, with pricing, key features, and source links.
2. Use the details in this event brief to fill out the registration form, and stop before submitting.
3. Fill out this supplier account form with our business details from the doc in the other tab. Stop before submitting.
4. Copy the contact details from this lead's website into a new row in my CRM sheet. Don't contact them.
5. Draft a reply to the newest customer email in Gmail using the quote in the other tab. Leave it as a draft.
6. Download the last three invoices from this billing page into my Downloads folder.
7. Group my open tabs by project and close duplicates. List what you closed.
8. Go through these LinkedIn profiles and draft a short, personal connection note for each. Don't send.
9. Check each product link in my sheet and mark any page that is out of stock or gone.
10. Book-keeping prep: open each receipt link in my sheet and add the date, amount and vendor to the next columns.

Permission checklist

When ChatGPT asks to use a site	Pick
First time on any site	Allow once
A tool you use every day (your sheet, your CRM)	Allow for this site
Banking, payments, payroll, admin consoles	Decline, or Allow once and watch
Any site, without asking	Don't. OpenAI marks Allow for all sites as Elevated Risk.

Before you press go

- Is the right Chrome profile open (the one with the extension)?
- Did you say what to leave alone ("don't send", "stop before submitting")?
- Are there passwords or card numbers in the prompt? Take them out.
- Will you be there to review the first run?

DO THIS

Read-and-compare first, act second. Allow once on new sites, never Allow for all sites. End form jobs with 'stop before submitting'. Don't paste passwords or card numbers into a browser task.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped
- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front
- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT API key** — no markup on it. No SMS or phone calls yet. \$49/month per business, \$149 Agency, and we move your contacts over for you.

Fynl.io keeps your clients, calendar, quotes, invoices and emails in one portal, so the vendor sheet or form ChatGPT fills for you ends up next to the client it belongs to, and the AI inside Fynl runs on your own Claude or ChatGPT API key, with no markup.
