FREE GUIDE

Claude Sheets and Claude Whiteboards: how to start, the limits, and when to keep Excel

On November 10, 2026, Anthropic launched Claude Sheets and Claude Whiteboards in beta. Who gets them, how to build your first sheet and board on your own numbers, the limits you should know before you trust it, when to keep Excel, and a twenty minute first try. Free PDF checklist, no sign-up.

WHAT THIS ADDS

Most coverage repeats the launch post. This guide reads Anthropic's two help articles line by line (opened November 11, 2026), pulls out the limits that matter for a small business (no live data, no PDF export, no pivot tables, mobile read-only, no HIPAA in beta), separates what is confirmed about Claude Meetings from what is only reported, and turns it into a twenty minute first try an owner can run today.

Why people are searching for this

On November 11, 2026, typing *claude sheets* into Google autocomplete offered *claude sheets vs excel*, *claude sheets whiteboard* and *claude sheets review*. People want to know if this replaces the spreadsheet they already have.

Where this comes from: Anthropic's announcement and its help articles Get started with Claude Sheets and Get started with Claude Whiteboards, all opened November 11, 2026. Both tools are beta and can change. Anything from a news report is marked as reported.

What launched on November 10

Anthropic's announcement, *Introducing Claude Whiteboards, Claude Sheets, and Claude Data*, is dated November 10, 2026. Claude Sheets is a spreadsheet built into Claude. Claude Whiteboards is a shared board for brainstorming with Claude and your team. Claude Dashboards, which launched in beta in October, is now generally available as Claude Data. The announcement says all three are included in paid plans and work on web, desktop and mobile.

The same day, Anthropic launched interactive connectors, where apps like Adobe, Atlassian, Box and Notion open as full apps inside Claude.

Who gets it

The Sheets help article says Claude Sheets is in beta on the Pro, Max, Ultra, Team and Enterprise plans. It is on by default on Team plans and off by default on Enterprise plans until it is turned on in **Organization settings › Artifacts**. Only Owners and Primary Owners can switch it on or off. Whiteboards follows the same pattern. The free plan is not listed. Sheets and whiteboards count toward your plan's usage limits.

Create your first sheet

From any chat, ask Claude for a sheet (the help article's examples include a campaign tracker, a hiring budget and a deal forecast). Or open the **Artifacts** tab, select the **Sheets** tile, and describe the sheet or start blank.

The help article's main tip: tell Claude what the sheet is for and give it your existing numbers, so it is built on your data and not on placeholders. An example prompt for a small business:

Build me a monthly cash flow sheet for a photography studio, with one tab for income by client, one tab for expenses by category, and a summary tab that shows profit per month.
Then paste last month's real numbers. Every sheet is saved in the Artifacts tab.

Work in your sheet with Claude

You and Claude edit the same cells. According to the help article, Claude can add tabs, write formulas that work across tabs, apply formatting and conditional formatting, and add dropdowns, checkboxes and charts. Formulas stay in the cells, so you can click any number and see how it was calculated. Claude Sheets includes 144 functions, and you can leave comments on cells.

Each Claude edit is outlined as it lands. To undo, open version history and restore an earlier version. The help page warns that restoring a version also removes any edits made after it.

Import and export

You can import a CSV file, a Google Sheet or an Excel file, or paste cells from Excel or Google Sheets. You can export as an Excel file (.xlsx) or CSV. **Send to** moves a sheet to partner apps; the announcement names Airtable, Asana, monday.com and Smartsheet. PDF export is not available yet.

The limits in the beta

- Up to 100,000 cells per sheet.
- Charts: bar, line and pie.
- Not available yet: pivot tables, protected ranges, find and replace, sorting by more than one column, filter views, multi-select dropdowns.
- Not supported: macros, VBA, Power Query, DAX, print layout.
- No live data from connected apps: you import or paste.
- Mobile: basic read-only access.
- During the beta, HIPAA, customer managed keys (CMEK) and zero data retention (ZDR) are not supported. Do not put client health information in it.

Claude Sheets or Excel?

Anthropic's help page answers this itself: Claude Sheets is a light, shared sheet you build with Claude. If your file already lives in Excel or Google Sheets, or you need their full feature set, it points you to Claude for Excel or Claude for Google Workspace instead. The announcement says the functionality is basic for now, and for full Excel features you should export or use Claude for Excel.

My split (opinion): use Claude Sheets to start something new fast, like a launch tracker, a price comparison or a small budget you want to talk through. Keep bookkeeping, payroll and anything with macros or pivot tables where it already is.

Start a whiteboard

The Whiteboards help article suggests boards for planning a launch, laying out the options for a decision or running a retro. From any chat, ask Claude for a whiteboard, or open the Artifacts tab and select the **Whiteboard** tile.

You can talk instead of typing: select the microphone next to the send button, talk through your plan, then select it again or press Escape. Dictation supports about 25 languages and follows your browser's language. Claude draws what you describe with shapes, arrows and sections.

Then ask Claude to regroup the board by theme, turn it into a timeline, or suggest what is missing between steps. Drag across one part to ask about just that part. The announcement adds that Claude can draft action items for each person.

Share a board and turn it into something

A board starts private. Click **Share** to bring people in; everyone works live, and you can follow a teammate. On Team and Enterprise plans, inviting people outside your organization needs an admin setting in Organization settings › Artifacts.

When the plan is settled, ask Claude to turn the board into a doc or a deck, use Send to for Lucid, Miro or Vani by Zoho, or use Share › Export to save a PNG. Claude only works from what is on the board, and you cannot import a board from a file.

What about Claude Meetings?

Confirmed: Anthropic's article lists Claude Meetings as coming soon, to add Claude to a call so it can take notes and update your team's documents.

Reported, not confirmed: TechCrunch reported on November 10 that it starts in beta for Team and Enterprise plans, works with Google Meet first, appears as a visible participant, and will not join calls with outside guests unless an admin allows it. Anthropic's help pages opened for this guide had no Meetings setup article.

A twenty minute first try

1. Open the Artifacts tab in Claude and check you see the Sheets and Whiteboard tiles. On Enterprise, ask an Owner to turn them on in Organization settings › Artifacts.
2. Export one real report from your current tool as a CSV, like last month's sales or expenses.

3. Start a sheet, import the CSV, and tell Claude what the sheet is for. Ask for a summary tab and one chart.
4. Click three totals and check the formulas yourself.
5. Start a whiteboard, talk through next month's plan for two minutes, and ask Claude to turn it into a timeline with owners.
6. Share both with one teammate, and export the sheet as .xlsx so you have a copy outside Claude.

Honest limits

- Based on Anthropic's announcement and help pages as of November 11, 2026.
- These are beta features; limits, plans and defaults can change.
- Claude Meetings was not tested; the details come from a news report.
- Everything you build counts toward your plan's usage limits.

What it costs

Anthropic says Sheets, Whiteboards and Data are included in paid plans; the pages read for this guide show no separate add-on price. You need Pro, Max, Ultra, Team or Enterprise; the free plan is not listed. Check current prices on Claude's pricing page before you decide.

DO THIS

If you already pay for Claude, try it this week on one real report. Build the sheet from your own numbers, click the totals to check the formulas, export an .xlsx copy, and keep anything sensitive out while it is in beta. Use the whiteboard for the next plan you would normally scribble on paper. Treat it as a fast starting point, not your system of record.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped
- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front
- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT API key** — no markup on it. No SMS or phone calls yet. $49/month per business, $149 Agency, and we move your contacts over for you.

Fynl.io is for running the business around the spreadsheet: one portal for your contacts, calendar, quotes, invoices and email, with AI that runs on your own key. Fynl is not made by Anthropic and is not connected to Claude Sheets or Whiteboards.
