Agents Office: Hire an Agent by Right-Click

Pulling Search Console by hand every Monday? In the Agents Office you right-click an empty desk, type one sentence, and Claude drafts the whole agent: name, desk, job and schedule.

WHAT THIS ADDS

Most small teams already know which weekly chore should be automated. What stops them is the setup: picking a tool, writing the steps, wiring a schedule. The hire flow removes that step. You say what the job is in plain words and the office writes the agent for you to check before you create it.

The problem it solves

Every Monday someone spends an hour opening Google Search Console, checking which blog posts lost clicks, and writing it down. Some weeks it gets forgotten, and nobody notices the drop until much later.

The job is clear. Setting up an automation for it never happens because the setup feels like a project of its own.

Right-click an empty desk

On your floor in the Agents Office, right-click any empty desk and choose **Hire an agent here**. The **New agent** window opens with two ways to build it.

Easy or All the details

- **Easy**: say what it should do in one sentence. Claude builds the agent.
- **All the details**: name, desk, job and schedule, filled in by you.

Easy is the fast route. All the details is there when you already know exactly what you want.

What Claude drafts

From one sentence, Claude fills in the whole form:

- **Name**: for example Blog Click Watch.
- **Desk**: the team it sits with, for example SEO & Blog.
- **Its job, in plain words**: numbered steps, such as reviewing Search Console for the blog, finding posts that lost clicks last week, and stopping to report if it cannot get in instead of guessing.
- **When it runs**: for example every Monday at 09:00.

When it runs

Pick **On set days**, **Every few minutes** or **Custom**. With set days you tick the days of the week and type the times in 24-hour format, with a comma between them if you want more than one run a day.

Check it, then create it

Read the drafted job before you press **Create agent**. Each run follows your words with the same safety rules as every other agent: it never sends, posts or spends unless the job says so. You can change everything later with **Edit**.

What it costs

Agents Office is an add-on to either Fynl plan: **$19.99 a month** or **$200 a year**. The plans are **$49 a month** for Starter and **$149 a month** for Agency. New to the office? Start with the full Agents Office guide, then read about handoffs between agents.

DO THIS

Start with one recurring chore you do by hand. Right-click an empty desk, choose Hire an agent here, describe the job in one sentence, then read the drafted job and schedule before you press Create agent. You can change everything later with Edit.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped
- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front
- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT API key** — no markup on it. No SMS or phone calls yet. $49/month per business, $149 Agency, and we move your contacts over for you.

Hiring runs inside the Agents Office in the Fynl portal, so the new agent sits on the same floor and follows the same rules as every other agent in the office.
