Fynl.io Booking calendars: one link, they pick the time

Stop trading messages to book one appointment. Send one link, your customer picks a day and a time, and it lands on your calendar.

WHAT THIS ADDS

Booking one appointment usually takes a string of back-and-forth messages. In Fynl.io, Booking calendars gives you one link instead: you set the length, your hours, a deposit if you want one and what happens after they book, and your customer does the rest.

One link instead of messages

Booking calendars gives you **one link** to send to your customer.

Set your own rules

Set the **length**, your **hours**, a **deposit** if you want one, and **what happens after they book**.

They pick the time

Your customer opens the link, picks a day, picks a time, types their name and presses **Book it**.

On your calendar and in Appointments

The booking lands on your **calendar** and in your **Appointments** list.

DO THIS

Open Booking calendars, set the length and your hours, and send the link to your next customer.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped
- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front

- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT API key** — no markup on it. No SMS or phone calls yet. \$49/month per business, \$149 Agency, and we move your contacts over for you.

Booking calendars lives in the same Fynl.io portal, so every booking lands on your calendar and in your Appointments list.
