

Fynl.io Invoices: pay links, deposits and automatic chasing

Build an invoice next to a live preview, send it with a pay link, take a deposit first and chase late ones with one press.

WHAT THIS ADDS

Getting paid slowly is rarely a client problem, it is a process problem. In Fynl.io, Invoices builds the invoice in an editor with a live preview of exactly what the client gets, sends it with a pay link that runs on your own Stripe, and lets you take a deposit first and the balance later.

Build it next to a preview

In **Invoices**, build the invoice in the editor. A **live preview** shows exactly what your client will receive.

Send it with a pay link

Send the invoice with a **pay link**. Your client pays by **card, Apple Pay or Google Pay**, straight into **your own Stripe** account.

Deposit first, balance later

Take a **deposit** first and the **balance** later. If an invoice goes late, press **Chase** and the reminder goes out.

The contract before it

Before the invoice comes the contract. Pick a **template**, press **Use**, and it goes out for signature.

DO THIS

Open Invoices, build one invoice with a deposit, and press Chase on the next one that goes late.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped

- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front
- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT API key** — no markup on it. No SMS or phone calls yet. \$49/month per business, \$149 Agency, and we move your contacts over for you.

Invoices sits in the same Fynl.io portal as Quotes and Contracts, so the contract before the invoice goes out for signature from a template.
