

GPT-6 Intelligent UI prompt pack: 20 tools to build in ChatGPT

Copy a prompt into the ChatGPT Chat tab and ask for a tool, chart or comparison you can use right in the conversation. Change the numbers to your own.

WHAT THIS ADDS

Intelligent UI shines when you ask for something you would normally build in a spreadsheet. Name the inputs you want to change and the result you want to see, and say if you want it as a calculator, a chart, a timeline or a side-by-side.

Paste these into the **Chat** tab in ChatGPT. GPT-6 decides the format, and you can ask for a different one ("as a chart", "side by side", "as a calculator").

Pricing and quotes

1. Build a price calculator with hours, hourly rate and materials, and show the total at the bottom.
2. Make a discount calculator: list price, discount percent and final price, with the savings shown.
3. Build a markup calculator: my cost, my markup percent, the selling price and my profit per item.
4. Make a deposit calculator: job total, deposit percent, deposit due now and balance due later.
5. Build a mileage charge calculator: miles, rate per mile and a minimum trip fee.

Decisions

6. Compare these two software plans side by side: price, seats and what each one is best for.
7. Show three suppliers side by side with price, delivery time and minimum order, and highlight the cheapest.
8. Compare leasing versus buying a \$30,000 van over five years as a chart I can adjust.
9. Give me a pros and cons layout for hiring a part-time assistant versus a freelancer.
10. Compare running a 10% off sale versus a free gift with purchase, using my numbers.

Money and planning

11. Make a bill splitter for \$124 with an 18% tip, and let me change the number of people.
12. Build a break-even calculator: fixed costs per month, price per sale and cost per sale.
13. Show how \$200 a month in savings could grow over 10 years at different rates.

14. Make a simple cash-flow chart for the next 6 months from these income and expense numbers.
15. Build a payroll cost estimator for one employee: hourly wage, hours per week and weeks per year.

Planning and explaining

16. Show my product launch week as a visual timeline, day by day.
17. Turn these 8 tasks into a priority grid of urgent versus important.
18. Explain how compound interest works with an interactive example I can change.
19. Make a checklist I can tick off for opening the shop each morning.
20. Draw a simple diagram of how a customer goes from first visit to repeat buyer.

Make any prompt better

- Name the inputs you want to change (hours, rate, people).
- Say the result you want to see (total, profit, each pays).
- Ask for the format: calculator, chart, timeline, side by side or checklist.
- Ask it to show the formula it used, so you can check it.

DO THIS

Pick one prompt, swap in your real numbers, and check the math before you use the result with a customer.

What Fynl.io is

One portal a small business runs itself on, instead of five subscriptions that do not talk to each other.

- A CRM and pipeline that shows every lead and where it stopped
- A calendar clients can book straight into
- Quotes, contracts and invoices, with deposits taken up front
- A website and form builder, so the enquiry lands in the same place
- Your Gmail connected, so the whole thread sits on the contact
- Automations for the follow-up you keep forgetting to send

The AI runs on **your own Claude or ChatGPT key** — no markup on it. No SMS or phone calls yet. \$49/month per business, \$149 Agency, and we move your contacts over for you.

When a ChatGPT calculator helps you work out a price, Fynl.io is where that price becomes a real quote and invoice, next to the lead it belongs to, and its AI runs on your own Claude or ChatGPT key with no markup.
